

The PRENDE Product Range CONTRAINDICATION STATEMENT

All normal considerations must be observed for all product use and protocols i.e. taking of case notes/client history prior to using any of the PRENDE product range.

None of the essential or core oils used in the PRENDE range (as listed clearly on each product packaging) are stated as contraindicated in pregnancy. We would always advise that customers with any medication, condition or situation other than full health check with their GP before using PRENDE products.

If the client has a symptomatic contraindication i.e. open wounds , painful varicose veins, sensitivity to heat exacerbated by heated product application, then the application of a hot oil preparation and or a paraffin wax preparation would be contraindicated unless otherwise stated/approved by their GP.

Presenting allergies or intolerance to any ingredient within the PRENDE range as listed below would also indicate a contraindication.

If all symptomatic diagnosis is clear, the use of any PRENDE product would be permitted.

The primary diagnosis by the Podiatrist is always paramount and current, but always open to change from appointment to appointment.

If in any doubt, don't proceed with treatment and refer to a medical practitioner for future approval to treat.
